

NAME

=====

ARGLIB - library

MEMORY

=====

```
NUMARG    = $005f: integer&;
ARGLIST    = $0060: array[10] of integer;
ARGLISTS   = $0060: array[63] of char&;
ARGTYPE    = $00a0: array[31] of char&;
FILFLG     = $00da: integer&;
FILDRV     = $00dc: integer&;
FILCYC     = $0311: integer&;
FILCY1     = $0330: integer&;
FILNAM     = 0301: array[15] of char&;
FILNM1     = $0320: array[15] of char&;
FILSTP     = $0312: char&;
```

VARIABLES

=====

```
_carg: integer;
```

ROUTINES

=====

```
proc _argerror(e: integer);
proc _agetval(var value:integer;
              var default:boolean);
proc _agetstring(var string: array[15] of char;
                 var default: boolean;
                 var cyclus, drive: integer);
```
