

NAME

=====

FILELIB - library

MEMORY

=====

```
FILFLG = $00da: integer&;
FILDRV = $00dc: integer&;
FILTYP = $0300: char&;
FILNAM = $0301: array[15] of char&;
FILCYC = $0311: integer&;
FILSTP = $0312: char&;
FILNM1 = $0320: array[15] of char&;
FILCY1 = $0330: integer&;
```

ROUTINES

=====

```
func _uppercase(ch1: char): char;
proc _asetfile(name: array[15] of char;
    cyclus, device: integer; subtype: char);
func _freedrv(drive: integer; printit: boolean);
```
