

NAME

=====

SYSLIB - library

CONSTANTS

=====

```
TAB8      = chr(9);
HOM        = chr(1);
CSC        = chr($11);
LF         = chr($a);
FF         = chr($c);
CR         = chr($d);
EOF        = chr($7f);
NORVID     = chr($0b);
INVVID     = chr($0e);
PRTON      = chr($12);
PRTOFF     = chr($14);
MMAXSEQ    = 8;
TOPMEM     = $c780;
MAXINT     = $7fff;
INPUT      = @0;
OUTPUT     = @0;
KEY        = @1;
PRINTER    = @1;
```

MEMORY

=====

```
RUNERR     = $000c: integer&;
ENDSTK     = $000e: integer;
BUFFPN     = $0015: integer&;
IOCHECK    = $0023: boolean&;
CURPOS     = $00ee: integer&;
```

VARIABLES

=====

```
_day:      integer;
_month:    integer;
_year:     integer;
```

ROUTINES

=====

```
proc _setemucom(i:integer);
func _getbcd(address: integer): integer;
proc _getdate;
proc _prtdate(device: file);
func _abs(x: integer): integer;
func _mod(x,n: integer): integer;
proc _tab(pos: integer);
proc _abort;
proc _prtext8(device: file;
               text: array[7] of char);
proc _prtext16(device: file;
               text: array[15] of char);
func _random: integer;
```
